

## 1 Set Up Hardware

Connect to the module through either TCP or ReST via LAN or USB

Power the module by using 12V DC, 0.8A PSU (not needed if using PoE)

Trigger IN and Trigger OUT

Device Under Test Connections		
Left	+	Power In (from Host/ PSU)
Connector		Ground Connection
(IN)	0 to 3	Bi-directional data signal
Right	+	Power Out (to device under Test)
Connector		Ground Connection
(OUT)	0 to 3	Bi-directional data signal

Front Panel LEDs	
LED Name	Description
Status	Green - Module Good Red - Fault
Action	Flashing Red - Streaming
Link Power	Green - Power link connected Off - Power link disconnected

## 2 Control

Standard ASCII terminal commands are used to control the Module:

### help

To power up (insert/connect the module)

**run:power up**

To power down (remove/disconnect the module)

**run:power down**

Instruction command respond with a success

**OK**

or a failure message in the form

**FAIL: 0x15 -Invalid argument**

Commands ending in '?' return data to the user

**run:power?**

This command returns PLUGGED or PULLED, depending on the current state of the module.

### Technical manual

See Multi-Protocol Link Breaker

Technical Manual for more information and full command list.

## 3 Trouble Shooting

### Basic Checks

- Check power supply is connected
- Check Ethernet/USB cable is correctly connected
- Check the module connection LED(s) are on:
  - If connected over ethernet check LED's on RJ45 connector
- Check Status LED on the front, if RED there is a fault with the module
